

## OUR VISION

It has been quite noticeable how dental offices are getting into more competitive market in recent years. It is common to see such offices everywhere, and we can clearly see that the patients are now expecting not just higher quality of medical services but also environment they receive their dental services at.

Based on our 15 years of experience in construction industry, we can confidently promise that we will provide high-quality design and construction services which will meet your patients' growing expectations. Our design consultant and our construction team will deliver the best solution and satisfaction from patients.

# DONCREST DENTAL CENTRE

Location : 420 Highway 7, Richmondhill  
Project Period : 3 Months, Fall 2014

## Project on Doncrest Dental Office

Two young doctors have recently decided to expand their business. They were planning a luxurious dental office in a busy mall. They were fully aware of the importance of "good design" which would create deeper relationship with patients by offering them comfortable and relaxed warm atmosphere when they walked in to the office. Also the two doctors had a manager in their office who had sensitive design preferences; she wanted an exuberant but modern with uncluttered design. We worked our best to apply most of their ideas to the design plan.

## 3D Modeling

3D modeling is an essential tool we have chosen to communicate with our clients. We use our 3D technology to provide initial drawings and any critical details necessary to provide best communication between clients and us. This way, our clients are able to see visually how the project is forecasted and give feedbacks as needed.

## Construction of Dental Office

We do not only focus on design quality. We also focus on enhancing technical reliability and efficiency through our design of dental office. Due to highly-technological dental equipment, dental office construction and renovation is far more complicated than any other types of projects. Flawless plumbing and electrical systems are now a must in order to operate a dental office. With this in mind, we work with sub-contractors who are veterans in their fields to bring out that flawless system.
